WORK EXPERIENCE

07-2025 - present

Amazon Web Services, Dublin, Ireland

Cloud Support Engineer I

- Provide technical support for Amazon WorkSpaces, Amazon AppStream 2.0, AWS Directory Service, and Amazon FSx (Windows, Lustre, and ONTAP).
- Troubleshoot complex issues involving VDI, application streaming, Active Directory, networking, authentication, and managed file systems.
- Work with engineering teams to resolve high-severity customer issues within SLA.
- Advise enterprise customers on AWS best practices, service configuration, and cloud infrastructure optimization

01-2024 - 08-2024

Unum, Carlow, Ireland

Project Manager/Software Developer

- Managed projects by prioritizing tasks and aligning with business goals.
- Collaborated on designing and launching monitoring software with GEM Team.
- Worked with infrastructure teams to identify and resolve software bugs.
- Wrote and optimized code through refactoring for better performance.

EDUCATION

09-2021 - 05-2025

MAYNOOTH UNIVERSITY - BSC COMPUTER SCIENCE & SOFTWARE ENGINEERING

Result - 1:1

RELEVANT SKILLS / KNOWLEDGE

- AWS Certified Solutions Architect
- Network Administration and IT Troubleshooting
- Proficient in Python, Java, JavaScript, HTML, CSS and SQL
- Experience with Windows, macOS, and Linux Operating Systems
- Git, CI/CD, Pipelines
- Data Analysis and Web Development Expertise
- Agile Project Management

RELEVANT PROJECTS

Fitness Tracker Application

- Developed a full-stack fitness web application using HTML, CSS, JavaScript, and Firebase, implementing secure user authentication (sign-in/sign-up) and session management.
- Integrated Fitbit API to deliver real-time health and activity tracking, enabling users to view live fitness metrics within the platform.
- Built core features including workout and meal planning tools, incorporating embedded external resources to support guided user training and nutrition.
- Designed and deployed a responsive, user-friendly interface with Firebase backend services for real-time data storage, updates, and user management.

Unix Shell

- Built a Unix-like shell supporting command execution with piping, I/O redirection, and process control using fork/exec.
- Implemented built-in commands such as cd and handled external system commands.
- Demonstrated OS concepts including process management, system calls, and inter-process communication via pipelines.
